

Seventh grade is a busy and exciting year at Sacred Heart School. This is the first year that the seventh graders have moved to different rooms and teachers for their classes.

In the seventh grade homeroom with Mrs. Martel they have math, Spanish, religion, and vocabulary. Mrs. Clupny teaches language mechanics and reading strategies. Mrs. Petteruti teaches science and geography.

Spanish is a new subject for the seventh grade students this year. We have already learned how to count, tell time, the seasons, weather, and activities. We have also done projects tied in with religion such as All Hallows Eve in Mexico and Christmas traditions in Spanish speaking countries.

In mathematics we have studied fractions, decimals, negative and positive integers, and exponents. We will be exploring geometry as the year continues. Everyone is very busy working on their science fair projects and learning about scientific method.
