

Welcome to the Sacred Heart School computer lab.

We have 14 Dell desktops and two laser printers. In September of 2010, SHS installed an Epson Wireless Interactive Projector. All of our computers have internet access. Students learn how to navigate the computer desktop. They are developing keyboarding skills, and utilizing numerous software applications for word processing, information organization, curriculum enhancement and multimedia presentations.

In addition we also have wireless internet access throughout the entire school

Mrs. LaPietra instructs computer lab for kindergarten through eighth grade. The lab is also open to all classroom teachers and their students throughout the week. At this time many of the Middle school students are busy with their Science Fair projects and appreciate the availability of this computer lab.
